Application/Control Number: 10/692,039

1. The Specification is hereby objected to under 37 CFR 1.71 in that it fails to teach adequately one of ordinary skill-in-the-art how to make and/or to use the invention.

Throughout claims 1-84, the claimed apparatus and method are claimed as employing "electromagnetic energy"; however, in the Specification, the range of wavelengths of electromagnetic energy used is very limited. For example, on page 6, line 34 of the Specification, the wavelength of energy discussed is 1.064 µm. Further, on page 9, line 16 of the Specification, the wavelengths discussed are those in the range 1.06-1.07 µm. It is further noted that the structure used to convert the electromagnetic energy to "electrical power" is disclosed as the solar cell (e.g., see page 6, line 35 through page 7, line 1). Thus, there is no disclosure for the use of all or even a large portion of the EM spectrum in the invention. Please note that solar cells are very limited in what range of EM wavelengths that they may use to produce electricity. For example, EM waves such as X-rays and y-rays could not be used with the invention as disclosed.

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-84 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for EM wavelengths usable by solar cells, does not reasonably provide enablement for EM wavelengths outside of the range usable by

solar cells. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or to use the invention commensurate in scope with these claims. Please see the remarks in the objection to the Specification in section 1 above.

Page 3

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The examiner-cited prior art herewith is of general interest for showing the state of the related prior art.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bernarr E. Gregory whose telephone number is (571) 272-6972. The examiner can normally be reached on weekdays from 6:30 AM to 3:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas H. Tarcza, can be reached on (571) 272-6979. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.
